REC\_DS using C\_Week 7\_COD\_Question 2

Attempt : 1 Total Mark : 10 Marks Obtained : 10

Section 1: Coding

#### 1. Problem Statement

Priya is developing a simple student management system. She wants to store roll numbers in a hash table using Linear Probing, and later search for specific roll numbers to check if they exist.

Implement a hash table using linear probing with the following operations:

Insert all roll numbers into the hash table. For a list of query roll numbers, print "Value x: Found" or "Value x: Not Found" depending on whether it exists in the table.

### **Input Format**

The first line contains two integers, n and table\_size — the number of roll numbers to insert and the size of the hash table.

The second line contains n space-separated integers — the roll numbers to insert.

The third line contains an integer q — the number of queries.

The fourth line contains q space-separated integers — the roll numbers to search for.

#### **Output Format**

The output print q lines — for each query value x, print: "Value x: Found" or "Value x: Not Found"

Refer to the sample output for formatting specifications.

## Sample Test Case

```
Input: 5 10
21 31 41 51 61
3
31 60 51
Output: Value 31: Found
Value 60: Not Found
Value 51: Found
Answer
#include <stdio.h>
#define MAX 100
#define EMPTY -1
void initializeTable(int table[], int size) {
  for (int i = 0; i < size; i++)
     table[i] = EMPTY;
}
int linearProbe(int table[], int size, int num) {
  while (table[index] != EMPTY && table[index] != num) {
  index = (index + 1) % size;
}
  int index = num % size;
```

```
return index;
   void insertIntoHashTable(int table[], int size, int arr[], int n) {
     for (int i = 0; i < n; i++) {
        int index = linearProbe(table, size, arr[i]);
        table[index] = arr[i];
     }
   }
   int searchInHashTable(int table[], int size, int num) {
     int index = num % size;
     while (table[index] != EMPTY) {
       if (table[index] == num)
          return 1;
        index = (index + 1) % size;
     return 0;
   int main() {
     int n, table_size;
     scanf("%d %d", &n, &table_size);
                                                                                 2176240701425
     int arr[MAX], table[MAX];
scanf("%d", &arr[i]);
     initializeTable(table, table_size);
     insertIntoHashTable(table, table_size, arr, n);
     int q, x;
     scanf("%d", &q);
     for (int i = 0; i < q; i++) {
        scanf("%d", &x);
        if (searchInHashTable(table, table_size, x))
          printf("Value %d: Found\n", x);
        else
        printf("Value %d: Not Found\n", x);
     return 0:
```

Status: Correct

Marks: 10/10
